

New Company Location – New Energy Concept

Chemnitz, Germany

Gantner Instruments is specialized in control and measurement technology in the renewable energy sector. The company's market leadership lies in monitoring of large-scale photovoltaic systems with outputs of 50 MW per system.

PV system and GREENROCK provide safety at the new workplace.

Energy security through electricity production from the own PV system and storing the surplus energy in the GREENROCK Storage system with included **emergency power functions**. Occupational safety through safe saltwater technology. GREENROCK is neither flammable, nor explosive nor toxic.

"Development and research of promising solutions is part of our work. Therefore we installed our own photovoltaic system with battery storage on the company premises in Zwönitz. The system is used to test our own technology in practice. In order to take account of the **increasing importance** of **environmentally friendly** and cost-efficient **energy storage**, we use the saltwater battery GREENROCK from BlueSky Energy. In addition to the **ease of installation**, we particularly value the **modular expandability** of this **innovative product**."

Jörg Scholz – Managing Director, Gantner Industries
