

SOLAR TOWER

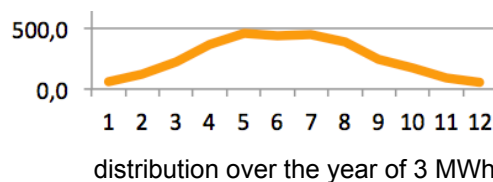

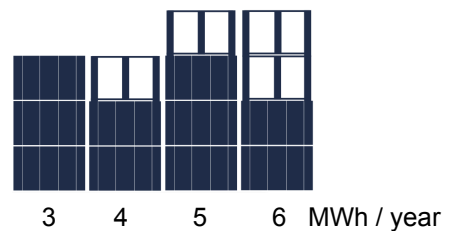

**Optimal utilization of solar energy
evenly distributed throughout the day and the year**

Preliminary

- ideal for locations north of 55th parallel latitude
- optimized CIS thin-film solar technology
- 5 kWp installed power
- 2,7 m diameter and 5 m high
- 36 portrait mounted frameless modules
- Krinner ground screw foundation
- annual yield approx. 3.000 kWh in Denmark
- electricity production throughout the day
- off-grid capability
- 30 years product life

- solar art in stylish design
- omnidirectional utilization of solar energy
- optimal self consumption of production
- broad spectral sensitivity
- will also be available with build in wind power
- all electronics and energy storage inside the tower
- environmentally friendly solar technology
- eco-friendly foundation solution
- meets the requirements for a C2C correct solution

Quality solution for the energy conscious
